### Notes:

Provincial totals are based on rates and a proportional representation of households in urban, rural, and northern communities (using the most recent Census data from 2021). Consumption levels: Two wireless plans with voice and data; 8,100 kWh of electricity; 2,800 m3 of natural gas spread over a weather-normalized monthly usage pattern typical of Saskatchewan homeowners; two vehicles, based on an index of common vehicles and driver profiles. SGI does not have access to the same auto insurance rate information in Quebec and Atlantic Canada. Rates in those provinces have been approximated.
